SUMMARY

Full-stack engineer with 6 years building financial and Web3 products in TypeScript, from React / Next.js front ends to NestJS back ends and the infrastructure under them. Built the backends for a self-custody wallet, a cross-chain liquidity router, and a DEX order book, and the payment infrastructure for a crypto-fiat bridge built for 10,000+ concurrent users, where a dropped or duplicated transaction was not acceptable. Most recently shipped a privacy payments app to Solana mainnet on my own, frontend to chain.

SKILLS

Frontend: React, Next.js, React Native, TypeScript, Tailwind CSS, Solana wallet adapter, component libraries

Backend: NestJS, Node.js, REST & GraphQL APIs, microservices, event-driven architecture, idempotent transaction processing

Fintech & Web3: Self-custody wallets, EVM & Solana, Ethers.js / Viem, cross-chain (LayerZero), order books, payment reconciliation

Data & Caching: PostgreSQL, MongoDB, Redis (caching, distributed locks, queues / BullMQ)

Cloud & DevOps: AWS (EC2, Lambda, S3) and equivalent Azure / GCP services, Docker, Kubernetes, CI/CD pipelines

EXPERIENCE

ZenApply (zenapply.app) · Remote

Lead Engineer · Feb 2026 - Present

- Only engineer on a three-person team; built and run the whole stack solo, including a NestJS / BullMQ pipeline ingesting and normalizing 25k+ job listings a day from 40+ sources with unstable schemas.
- Shipped an AI auto-fill engine handling 2k+ applications a day across 30+ ATS platforms, completing ~100% of supported platforms and 80-90% of unsupported ones by reading each form's schema and constraining the model to valid answers.

BlockApex (acquired Xord's services division, Mar 2023) · Karachi, PK

Senior Software Engineer & Technical Lead · Mar 2023 - Feb 2026

- Designed the payment infrastructure for Midl, a P2P crypto-fiat bridge built for 10,000+ concurrent users, using distributed locking and idempotency so no transaction was dropped or applied twice.
- Built the backend for Handle Pay, a unified self-custody wallet: deterministic address derivation across EVM and Solana, cross-platform passkey authentication, and fault-tolerant RPC handling.
- Designed the routing logic for Aasan Bridge, a LayerZero-based liquidity solver moving assets between EVM chains and Solana.
- Architected the order-book (CLOB) backend for Elektrik DEX, normalizing order streams for real-time matching and settlement.
- Standardized CI/CD across the org's services and mentored junior engineers on distributed-system design.

Full-Stack Engineer · Xord · May 2022 - Mar 2023

- Built the React / Next.js frontend and the backend for Script TV, a watch-to-earn platform, including an indexing layer that processed millions of on-chain events into off-chain rewards, with ingestion workers that survived RPC node failures without data gaps.
- Optimized a high-traffic explorer service by analyzing query plans and adding caching, and implemented OAuth / JWT flows for enterprise clients.

Tezeract · Karachi, PK

Lead Engineer · Dec 2020 - May 2022

- Led an engineering team of 4: hired and mentored the engineers, ran code reviews, and owned architecture and DevOps across client projects.
- Architected the payment-reconciliation engine for an OTA platform processing \$50k+ in monthly volume, wrapping legacy Sabre GDS APIs in a clean integration layer for a modern stack.
- Built computer-vision products for clients, including Formole (pose estimation, later venture-funded) and gesture-controlled feedback kiosks deployed at Dubai Mall.

Xord · Karachi, PK

Full-Stack Engineer · May 2020 - Dec 2020

- Placed with client Xehen from Aug 2020 as lead engineer, establishing the frontend and backend architecture and API standards.

PROJECT

Ghost Pay · ghost-pay.nabeelkhan.dev · Next.js, Solana

- Privacy-first payments app live on Solana mainnet, built solo: shielded vaults, ZK-proof transfers, payment links, CSV payroll, and viewing keys that give auditors read-only access.

EDUCATION

M.S. Computer Science, Virtual University of Pakistan · 2024 - Present (expected Nov 2026)

B.S. Software Engineering, University of Karachi (UBIT) · 2017 - 2021
